

# Project Profile

805 Lea | Nashville, TN

The 29-story urban apartment building was erected in Nashville's "SoBro" neighborhood used 200,000 sq. ft. of RevealShield SA, WrapShield SA, and accessories to provide a protective WRB and air barrier under the ACM (open joint) cladding. For this premier mixed-use project, the architect selected a combination of WrapShield SA, RevealShield SA, and the VaproLiqui-Flash system for its easy installation, superior UV-stability, and water holdout.
