

*Aura, a remarkable construction project nestled in the picturesque landscape of Snowmass Village, CO, showcases the fusion of a mass timber structure and metal framing with gypsum. Spanning 40,000 sq. ft., WrapShield SA's innovative adhesive technology eased installation, saving both time and labor costs. WrapShield SA was installed during Snowmass Village's unpredictable weather months (August-November) withstanding sun, wind, rain and below freezing temperatures, facilitating the timely enclosure of the project before the harsh winter months began.*

*When completed Aura will be the newest and most exclusive collection of twenty-one slope-side residences in the vibrant Snowmass Base Village.*

## The Specifications
