PRODUCT(S)
WrapSHIELD[®]

PROJECT DESCRIPTION

Over 800,000 ft² of WrapShield was installed on the 2 million ft² McCarran Airport Terminal 3. WrapShield was chosen because it combines the best properties of a vapor permeable membrane and an air barrier in one innovative affordable product.

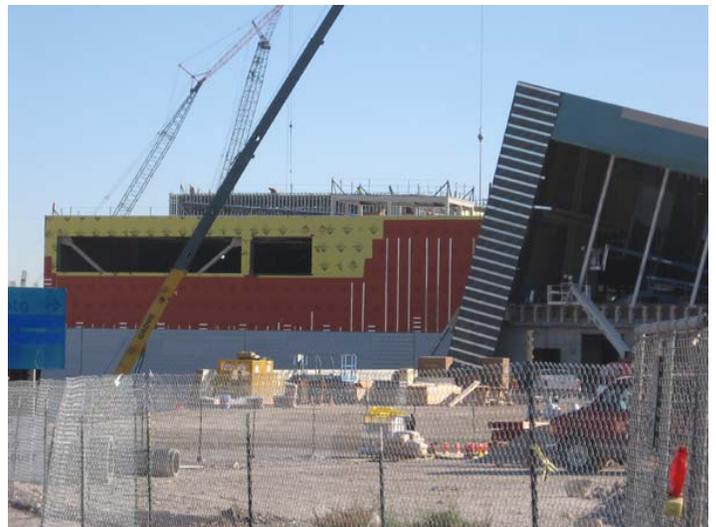

With a rating of 50 perms, WrapShield provides the highest vapor permeability in a commercial quality air barrier breather membrane.

The \$2.4 billion construction project began January 2010 with a completed date slated for Spring 2011. More than 1800 skilled labor's are on the job site.

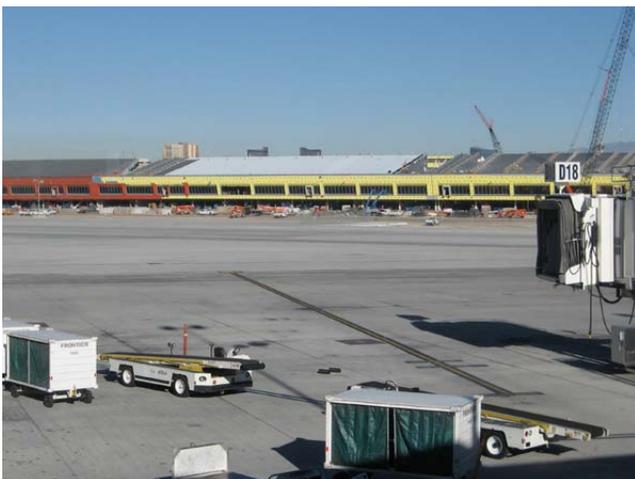

The expansion is part of a \$4 billion, 20 year master plan. Terminal 3 will allow McCarran to reach its maximum sustainable capacity of 53 million arriving and departing passengers per year.

Terminal 3 at the Las Vegas McCarran International Airport, uses 800,000 ft² of WrapShield as part of a massive \$2.4B construction project.

Work in progress installing 800,000 ft² of WrapShield.
