**FEATURES**
- Excellent adhesion to a wide range of building materials, including polymeric surfaces that are traditionally difficult to adhere to, such as peel and stick weather resistant barriers
- Priming not required on most surfaces
- Usable over wide temperature range

**BENEFITS**
- Adheres to many polyethylene film based weather resistant barriers
- Adheres to many spun-bonded polyolefin and fibrous or woven air barriers
- Adheres to many other sealing elements such as flashing or elastomeric liquid applied weather barriers
- UV resistant
- Excellent durability, does not become brittle or crack
- Movement capability of +/- 25% in a properly designed joint

**COMPOSITION**
- One part RTV, neutral-cure silicone sealant

**DESCRIPTION**
*Dow Corning® 758 Weather Barrier Sealant* is a one part, neutral cure silicone. It easily extrudes and cures at room temperature by reaction with moisture in the air to form a durable, flexible rubber seal.

This medium modulus sealant is specially designed for the weathersealing of weather resistant barriers where low movement is anticipated, such as window and door frames and wall penetrations.

**APPLICATIONS**
- Interior air sealing between a sheet or liquid applied weather resistant barrier and fenestration element
- Edge lap seal for weather resistant barriers
- Sealing penetrations in weather resistant barriers such as plumbing or ductwork
- Sealing other difficult to adhere surfaces such as mill finishes and plastics

**TYPICAL PROPERTIES**

HOW TO USE
Please consult the Dow Corning Americas Technical Manual, Form No. 62-1112, for detailed information on state-of-the-art application methods and joint design. Please contact your local Dow Corning Sales Application Engineer for specific advice.

SURFACE PREPARATION
The application surface must be clean, dry, sound and frost-free. Mask adjacent surfaces and apply primer if required. Laboratory testing or field adhesion testing may be used to demonstrate primer requirements. Please contact your local Dow Corning Sales Application Engineer for specific advice.

APPLICATION
Install sealant according to Dow Corning published guidelines. Ensure the surfaces to be sealed are free of dust, dirt, debris and contaminants. Apply primer as needed and allow to dry as needed. Install backer material for any joint moving more than 15%. Lap joints will not require backer material. Apply and tool the sealant. Dow Corning 758 should be tooled prior to it skinning over. Standard caulking tools, materials, and methods may be used.

JOINT DESIGN
The sealant joint should be designed so that the maximum expected sealant movement, including thermal, settlement and live load, does not exceed 25% in order to achieve a sufficient durability of the seal. Dow Corning recommends consulting with the flashing manufacturer for details on the movement capability of flashing materials as used in your joint configuration.

When detailing the sealant joints using Dow Corning 758, the following should be considered:
• Dow Corning 758 may be used to seal lap joints between two pieces of flashing or other materials.
  • Please ensure a ¼" (6 mm) sealant to substrate contact (“bite”) on each side of the lap joint and minimum 1/8" (3 mm) sealant depth.
  • The minimum width of a perimeter joint, or “hourglass” joint should be ¼". For joints between ½" to ¾" (6-12 mm) wide a minimum seal depth of ¼" (6 mm) is required.
  • For joints above ¾” (12 mm wide), a width to depth ratio of 2:1 should be used up to a maximum depth of ½" (12 mm). Joints in excess of 1" (25 mm) wide are possible but sealant depth should not exceed ½" (12 mm). It is recommended that specific recommendations be obtained from Dow Corning for any joints in excess of 3" (75 mm).
  • In applications where fillet type joints are to be used, a minimum of ¼” (6 mm) sealant bite is recommended for each substrate.

USABLE LIFE AND
STORAGE
When stored at or below 27°C (80°F), Dow Corning 758 Silicone Building Sealant has a shelf life of 12 months from the date of manufacture. Refer to product packaging for “Use By Date.”

PACKAGING
INFORMATION
Dow Corning 758 is available in 20 oz (591 ml) sausages.

LIMITATIONS
Dow Corning 758 Silicone Weather Barrier Sealant should not be used:
• As an aesthetic weatherseal
• In below grade applications
• In structural applications
• In continuous water immersion applications

This product is neither tested nor represented as suitable for medical or pharmaceutical uses.

HEALTH AND
ENVIRONMENTAL
INFORMATION
To support Customers in their product safety needs, Dow Corning has an extensive Product Stewardship organization and a team of Product Safety and Regulatory Compliance (PS&RC) specialists available in each area.

For further information, please see our website, dowcorning.com or consult your local Dow Corning representative.

LIMITED WARRANTY
INFORMATION – PLEASE
READ CAREFULLY
The information contained herein is offered in good faith and is believed to be accurate. However, because conditions and methods of use of our products are beyond our control, this information should not be used in substitution for customer’s tests to ensure that our products are safe, effective, and fully satisfactory for the intended end use. Suggestions of use shall not be taken as inducements to infringe any patent.
Dow Corning’s sole warranty is that our products will meet the sales specifications in effect at the time of shipment.

Your exclusive remedy for breach of such warranty is limited to refund of purchase price or replacement of any product shown to be other than as warranted.
