

Breathable, Proven, Healthy Building Envelope Systems

Hill 7 Project, Downtown Seattle, WA

Time and Labor Saving Application

All weather installation, no special joint treatment, primers or installation equipment ever required.

Complete Air Barrier System

Achieve air barrier continuity by adding a single product – VaproLiqui-Flash™ breathable, waterproof flashing material – to protect rough openings.

Supports Healthy Building Performance

Membranes contain zero red list chemicals, meeting rigorous Living Building Challenge standards and consistently chosen for Net Zero Energy and Passive House projects.

Revolutionary Self-Adhered Adhesive

Tenacious, vapor permeable adhesive allows for initial repositioning during installation while maintaining high drying capacity.

Convert your project to VaproShield water resistive vapor permeable air barrier membranes and experience the FrogSkin™ difference: reduced installation time, no VOCs or primers, and installation in all weather conditions.

Feel free to call us: our Technical Team would like to help you determine the best solutions for your particular project: 1-866-731-7663.
