**PRODUCT(S)**  
**WrapShield HS**

**PROJECT DESCRIPTION**

This year-round, private residence is located on the eastern shore of beautiful Lake Michigan. The home will be subjected to the extremes in weather from heat and humidity to high winds and bitter cold. To ensure the home is well protected, the home owner and builder selected WrapShield HS.

WrapShield HS is state-of-the-art breathable, water resistant membrane comprised of WrapShield bonded with Home Slicker® which is a rolled product that creates the necessary airspace forming a rain screen wall system. Home Slicker's unique three-dimensional matrix allows moisture to escape quickly while protecting the sidewall from the damaging effects of mold, mildew and moisture intrusion.

One unique product combining a rain screen membrane with a water resistive barrier that simultaneously saves on labor and material. Suitable for use in commercial, mixed-use and residential construction.

*WrapShield HS close up around window shows its unique three-dimensional matrix allowing moisture to escape quickly while protecting the sidewall from the damaging effects of mold, mildew and moisture intrusion.*

*WrapShield HS detail showing application (above); closeup photo showing tight and "clean" application (left).*
