

Project Profile

1501 Mike Fahey St. | Omaha, NE

Located at 1501 Mike Fahey St. in Omaha, Nebraska, the construction project stands as a testament to innovative design and cutting-edge technology, with 115,000 sq. ft. of RevealShield SA Self-Adhered installed as the weather resistive air barrier. RevealShield SA allows open cladding joints up to 2 inches, providing architects and designers the freedom to explore new realms of façade creativity. Moreover, RevealShield SA meets stringent safety standards, achieving zero flame spread and excelling in cone calorimeter tests, making it compliant with current IBC Codes Chapter 1402.5 Exterior Wall NFPA 285 exemptions.

RevealShield SA Self-Adhered is also an environmentally conscious membrane, emitting zero VOCs, eliminating the need for primers, and contributing to a healthier indoor environment. Its effectiveness in preventing air infiltration, as demonstrated by ASTM 2357 air barrier assembly tests, helps to ensure superior energy efficiency for the building.

The Specifications

VaproShield Solution	BlockShield SA for Walls
Industry Type	Commercial
Construction Type	New
Architect	Noddle Companies www.noddlecompanies.com/properties
Installer	E&K of Omaha www.e-kco.com
Contractor	Kiewit www.kiewit.com
