

Extending the Life of the Roofing Assembly

VaproShield, an industry leader in advanced building envelope solutions, is pleased to release *Extending the Life of the Roofing Assembly*, an AIA accredited technical seminar. This live presentation provides **detailed information on how breathable, vapor-open roofing underlayments mitigate water intrusion - extending the life of the roofing assembly.**

Your training will be presented using online meeting software. Instructions for accessing your online course will be sent from your host.

We will examine how a breathable roofing underlayment can:

- Provide drying
- Ease installation
- Mitigate water intrusion
- Extend the life of the roofing assembly

Learning Objectives Course AIACESVS105

- Describe the history of roofing underlayments
- Understand the difference between asphalt felt and synthetic underlayment
- Define the roof assembly barriers; heat, air, moisture
- Articulate why a breathable roofing underlayment provides superior drying capacity over conventional roofing underlayments
- Understand key details when installing a roofing underlayment

Visit VaproShield.com to schedule your AIA Live Accredited Technical Seminar.
