

Extending the Life of the Roofing Assembly

VaproShield, an industry leader in advanced building envelope solutions, is pleased to release Extending the Life of the Roofing Assembly, an AIA and IIBEC accredited technical seminar. This live presentation provides **detailed information on how breathable, vapor-open roofing underlayments mitigate water intrusion - extending the life of the roofing assembly.**

Your training will be presented using online meeting software. Instructions for accessing your online course will be sent from your host.

We will examine how a breathable roofing underlayment can:

- Provide drying
- Ease installation
- Mitigate water intrusion
- Extend the life of the roofing assembly

Learning Objectives Course AIACESVS105

- Describe the history of roofing underlayments
- Understand the difference between asphalt felt and synthetic underlayment
- Define the roof assembly barriers; heat, air, moisture
- Articulate why a breathable roofing underlayment provides superior drying capacity over conventional roofing underlayments
- Understand key details when installing a roofing underlayment
