

A Contemporary Approach to Successful Stucco Wall Assemblies

VaproShield, an industry leader in advanced building envelope solutions, is pleased to release Contemporary Approach to Successful Stucco Wall Assemblies, an AIA accredited technical seminar. This new course will **explore case studies** from failure to remediation, including successful projects utilizing the **innovative all-in-one drainage matrix and weather resistive air barrier technology**.

Your training will be presented using online meeting software. Instructions for accessing your online course will be sent from your host.

We will examine:

- History of exterior stucco
- Recent developments in stucco assemblies
- Drainage, venting and details of stucco wall systems
- Case studies from failure to remediation

Learning Objectives Course AIACESVS305.1

- List the history of stucco cladding
- Identify drainage and venting requirements for a stucco assembly
- Explore benefits of a vapor permeable WRB air barrier behind a stucco assembly
- Understand stucco wall system details
- Appraise case studies from failure to remediation
