

RevealShield IT Integrated Tape and VaproLiquiFlash were installed on the brand new 5 N Go Car wash under a stunning blue and gray phenolic façade. SlopeShield SA was also installed under the standing seam metal roofing. With weather conditions creating residual moisture in the air and on all the building surfaces, the architect had to find materials that were durable and would not deteriorate in a moist environment. High-performance phenolic panels and VaproShield have been used in conjunction on high-moisture projects along the California coast for 20-years, so this was a natural application.

Due to the open joint style of façade, residual damage from sunlight exposure would void the warranty of most water-barriers, however RevealShield IT offers a clear solution with UV-stability, 20-year warranty, and desired black reveal behind the open joints. Additionally, it was easy to install and did not require expensive spray equipment.

The Specifications

VaproShield Solution	RevealShield IT Integrated Tape SlopeShield Plus SA
Accessories	VaproLiquiFlash
Construction Type	New, Commercial
Architect	Leon E. Felus, AIA Marina Del Rey, CA leon@leonfelus.com
Installing Contractor	R.B. Olson Construction http://rbolson.com/Exterior.htm
VaproShield Rep	W.H. Steele Company www.whsteele.com
