

This 280 sq. ft. tiny home leaves no space unused, making it extremely important to protect the outside from the elements, but to also ensure the comfort and sustainability of the interior. WrapShield SA Self-Adhered WRB Air Barrier was the perfect choice to flash the rough openings and WrapShield IT Integrated Tape was used to cover the remaining plywood on this custom built, one-of-a-kind tiny home. Both products will allow the new owners to enjoy many restful nights in their loft master suite without the fear of mold or mildew forming in the wall assembly.
