

Project Profile

IU Health | Fishers, IN

The Indiana University Health building in Fishers, IN stands as a testament to modern construction innovation, prominently featuring BlockShield SA for Walls from VaproShield. This state-of-the-art product is specifically engineered to serve as a robust barrier against water, air, and moisture infiltration in commercial and residential constructions. With 50,000 sq.ft. of BlockShield SA installed on the building, it ensures defense against the outside elements, contributing to the structure's resilience.

BlockShield SA for Walls offers a range of advantages beyond its protective capabilities. Its 12-month UV and weather exposure coupled with all-season installation make it an ideal choice for projects requiring extended exposure to outdoor elements during construction.
