PRODUCT(S)  
**WallSHIELD<sup>®</sup> Black**

PROJECT DESCRIPTION  
VaproShield WallShield Black was installed in double layers on over 90,000 ft<sup>2</sup> of the hospital. The project consists of 74,000 ft<sup>2</sup> of renovation and 185,000 ft<sup>2</sup> of new construction. The architect employed sustainable design strategies to make the hospital energy efficient and create a healthy indoor building environment.

The updated hospital will provide more patient rooms, public areas, meeting rooms, a state-of-the-art birthing center and new operating rooms. Construction began in April of 2008 and is expected to conclude in the fall of 2010.
