PRODUCT(S)

WALLSHIELD® Water Resistive Barrier Membrane
REVEALSHIELD™ Black, UV Stable Water
Resistive Vapor Permeable Air Barrier Membrane

PROJECT DESCRIPTION

Approximately 4,000 sq. ft. of WallShield and 1,000 sq. ft. of RevealShield was installed on Double Zero Pizza located in Calgary, Alberta. This new construction uses the combined performance of WallShield and RevealShield to create a high drying capacity building envelope.

WallShield's high drying capacity prevents mold and mildew growth while still allowing interior moisture to escape the building envelope. By protecting the building envelope with WallShield and RevealShield membranes, Double Zero Pizza is investing in the health and longevity of it's newly constructed facility.

Approximately 4,000 sq. ft. of WallShield and 1,000 sq. ft. of RevealShield was installed on Double Zero Pizza in Calgary, Alberta.

WallShield installs easily and can span framing members without solid substrate providing moisture protection and facilitating completion of the "dry-in" phase.

Compatible with multiple substrates and most major cladding systems, WallShield is conducive for nearly any construction project.
