PRODUCT(S)

WRAPSHIELD[®] Water Resistive Vapor Permeable Air Barrier Sheet
WRAPSHIELD SA[®] Self-Adhered Water Resistive Vapor Permeable Air Barrier Sheet
REVEALSHIELD[™] Black, UV Stable Water Resistive Vapor Permeable Air Barrier Membrane
VAPROLIQUI-FLASH[™] Vapor Permeable Liquid Applied Flashing

PROJECT DESCRIPTION

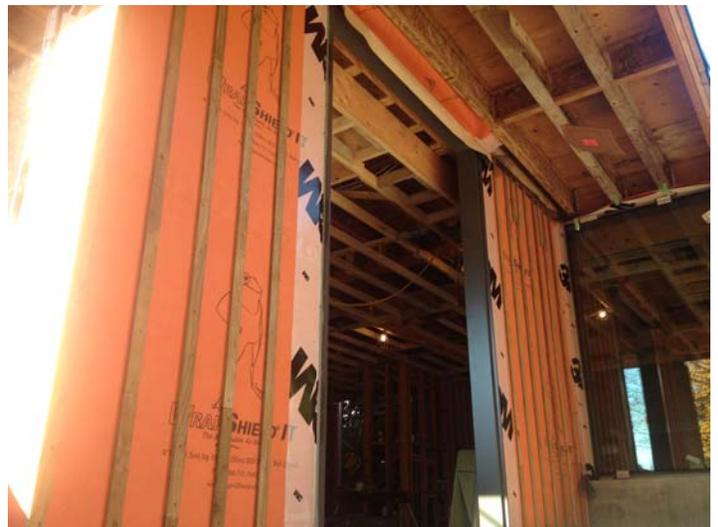

Approximately 10,000 sq. ft. (929 M²) of WrapShield, WrapShield SA Self-Adhered, RevealShield and VaproLiqui-Flash was used for the new construction of this private residence located in Vancouver, British Columbia.

A high-end investment, this newly constructed home was designed to feature unique comfort and energy-saving features totally customized to meet the homeowner's needs. Used in combination with one another, WrapShield, WrapShield SA Self-Adhered, RevealShield and VaproLiqui-Flash create a total, continuous air barrier system.

This unique air barrier system can reduce home energy costs by as much as 40% by controlling air flow within the building envelope. Importantly, the above-mentioned VaproShield water resistive vapor permeable air barrier membranes' innovative permeable design allow condensed water vapor to escape the building envelope. This features prevents the formation of mold, mildew, rot and metal corrosion to ensure structural integrity and building longevity. A fact guaranteed to convince the discerning homeowners their valuable investment is well protected for years to come.

Over 10,000 sq. ft. (929 M²) of VaproShield products were installed on this private residence located in Vancouver, British Columbia. These products include: WrapShield Water Resistive Vapor Permeable Air Barrier Sheet, WrapShield SA Self-Adhered Water Resistive Air Barrier Sheet, RevealShield Black, UV Stable Water Resistive Vapor Permeable Air Barrier Membrane and VaproLiqui-Flash Vapor Permeable Liquid Applied Flashing.

A new construction, this high-end private residence was designed with custom comfort features and innovative energy-saving elements to meet the discerning homeowner's vision.
