**PRODUCT(S)**

**REVEALSHIELD™ SA Self-Adhered , UV Stable Water Resistive Vapor Permeable Air Barrier Membrane**

**PROJECT DESCRIPTION**

Over 4,000 sq. ft. of RevealShield SA Self-Adhered UV Stable Water Resistive Vapor Permeable Air Barrier Membrane was installed on Green Man, a commercial project located in the vibrant center of Denver, Colorado.

The Architect chose RevealShield SA Self-Adhered for its compatibility with multiple cladding types, including open joint panels and repurposed synthetic wood flooring—saving time and money. RevealShield SA Self-Adhered does not require substrate preparation, tapes or primers, reducing labor costs by at least 20%. In addition, common hand tools were used for installation, eliminating the need for expensive equipment.

RevealShield SA Self-Adhered adds to the building's overall efficiency by helping to prevent air leakage and reducing energy consumption. RevealShield SA Self-Adhered is also vapor permeable, helping to reduce the risk of mold, mildew, rot and corrosion which can contribute to structural damage.

*Over 4,000 sq.ft. of RevealShield SA Self-Adhered was installed on the Green Man building.*

*RevealShield SA Self-Adhered does not require substrate preparation, tapes or primers reducing labor costs by at least 20%.*
