PROJECT DESCRIPTION

This 390,000 sq. ft. project is a replacement for the existing Hampshire High School and Middle School with current capacity for 750 students. The new facility capacity tops out at 2,500 with a 750-seat auditorium, 2,500 seat gymnasium and 100 seat lecture center.

Approximately 8,000 sq. ft. of VaproShield WrapShield was selected due to its ability as a breathable air barrier, in conjunction with required features behind a Trespa Rainscreen Cladding System, including: self-cinching, UV stability and black flashing behind open joint reveals.

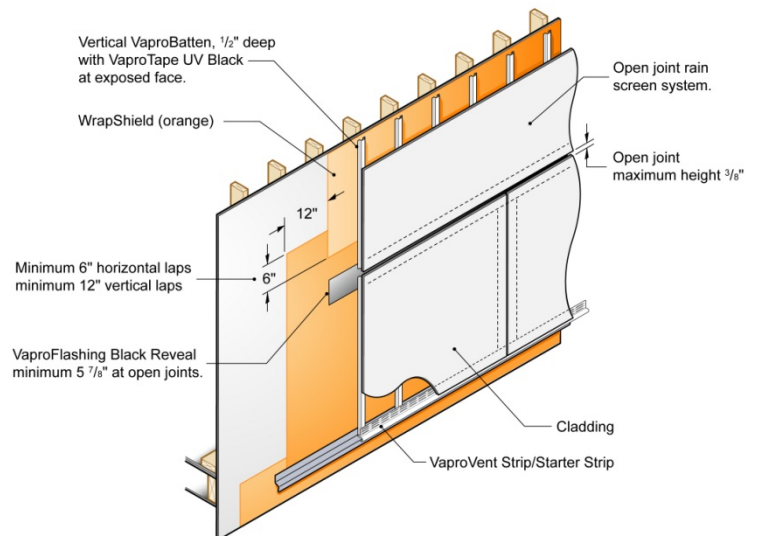

WrapShield (orange) installed under Trespa cladding.

Note installation of VaproFlashing Black
