PRODUCT(S)

WallSHIELD[®]

PROJECT DESCRIPTION

Over 25,000 ft² of VaproShield WallShield was installed at Lake County Health behind Trespa panels. WallShield is the most vapor and air permeable weather resistant membrane in the industry. With a rating of 212 perms, WallShield allows trapped interior moisture to escape, reducing the risk of mold, mildew and rot.

The three story building will allow all departments to be housed in the same building as they were spread out around the metropolitan area. Although the building is not LEED certified, many LEED contributing products were used including WallShield.

Over 25,000 sq ft of WallShield was used on the Lake County Health building.
