PROJECT DESCRIPTION

Over 36,000 square feet of WrapShield SA Self-Adhered was installed at Redding School of the Arts. Upon completion, Redding School will be one of just a few LEED Platinum certified schools in the nation. It will also most likely be the largest.

In addition to choosing WrapShield SA which supports sustainable building practices and efforts, the architects and building team are doing many things to achieve LEED Platinum certification: rainwater reserve, natural light (all classrooms face north), geothermal heating, solar panels and more.

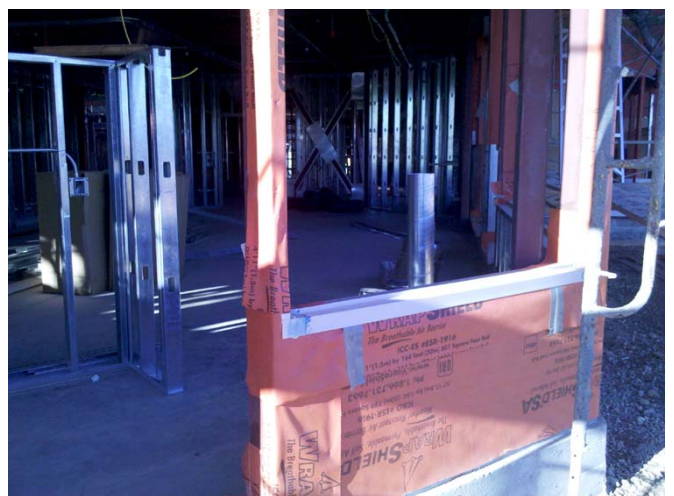

The project will accommodate approximately 400 students and 60 employees. The 52,000 square feet, two-story building includes classrooms, art rooms, music rooms, library, information center, technology room and piano lab. Estimated completion time is Spring 2011.

Architectural rendering of Redding School of the Arts.

Over 36,000 ft<sup>2</sup> of WrapShield SA was used for this project.

Windows flashed with WrapShield SA Self-Adhered, 3D Factory Formed Corners and VaproSillSaver saving thousands of hours on installation.
