PRODUCT(S)

WRAPSHIELD Water Resistive Vapor
Permeable Air Barrier Membrane
VAPROLIQUI-FLASH[™] Vapor Permeable
Liquid Applied Flashing

PROJECT DESCRIPTION

Over 2,000 sq. ft. (185.81 M²) of WrapShield Water Resistive Vapor Permeable Air Barrier Membrane was applied as a retrofit on a south end home in Halifax, Nova Scotia.

The previous contractors had applied a competitor housewrap and tape to seal the joints. Without proper flashing, this installation left incoming water no where to go and resulted in rot formation. VaproShield's WrapShield and VaproLiqui-Flash were brought in to replace the failed competitor system. Water resistive and vapor permeable, WrapShield can protect your building from the damaging effects of moisture intrusion and entrapment, making the product an ideal choice to prevent problems of mold, mildew and rot.

When asked to comment on the job, MRB Contracting stressed the importance of investing in quality building products, like those produced by VaproShield. "This job is an example of why we invest in procedures," explained the general contractor. "Prevention is always better than cure."

The previous contractors applied a competitor housewrap and tape to seal the joints. Without proper flashing, the installation left incoming water no where to go. This caused extreme water damage and rot. The problem was solved with WrapShield which can protect your building from the damaging effects of moisture intrusion and entrapment

To fix the competitor system's failure, over 2,000 sq. ft. (185.81 M²) of WrapShield and VaproLiqui-Flash were installed as a retrofit on a south end home located in Halifax, Nova Scotia.
