PRODUCT(S)

WRAPSHIELD[®] SA, Self-Adhered

PROJECT DESCRIPTION

Over 300,000 ft² of WrapShield SA (Self-Adhered) was installed over Trespa, metal and brick exterior cladding. WrapShield SA was chosen for its ease of installation and high permeability factor. Primer is not required saving thousands on materials and labor costs. No special tools are needed to install WrapShield SA and VaproShield offers a 20 year warranty on all their products.

The \$364 million project is the largest construction contract ever awarded by the Veterans Administration and is on schedule for an October 2011 delivery.

The phase four main hospital is 790,000 ft², includes a 90-bed seven story tower and two-story 20-bed mental health facility.

Materials include CMU block, poured-in-place concrete, architectural aluminum for windows and louvers, galvanized structural steel, metal panel systems and phenolic exterior wall panels.

Over 300,000 ft² of WrapShield SA Self-Adhered being applied to VA Hospital main structure.

WrapShield SA Self-Adhered easily installs around window openings.
